53-608 Wrocław
Poland

ORDER DETAILS REQUIRED

When placing an order by email, please provide full billing details, customer details, contact person, phone number, email address, and all information required to identify and process the order correctly.

Each order should include the product name, quantity, selected finish, cable colour, metal element finish, and any additional configuration details.

For multi-lamp compositions, please also specify the required ceiling rose type, layout, number of lamps, and any special installation requirements.

If the cable colour is not specified in the order, black cable will be used as the standard option.

CUSTOM ORDERS AND SPECIAL CONFIGURATIONS

For non-standard, customised orders or products made according to individual specifications, each order requires separate confirmation.

Customised products, non-standard configurations, and products made according to individual specifications require individual quotation. Additional design, technical, or production costs may apply depending on the scope of customisation.

Custom-made, personalised products and products prepared according to individual specifications are not subject to standard return conditions.

PRICING TERMS

All prices listed in this price list are net prices in EUR and are based on EXW Wrocław, Poland, Incoterms® 2020, unless agreed otherwise in writing.

VAT is not included in the listed prices and, if applicable, will be added in accordance with the relevant tax regulations.

Unless otherwise stated, each listed price refers to a single product.

The prices do not include transport, insurance, unloading, customs duties, import taxes, installation, or any additional services unless explicitly agreed otherwise.

Standard packaging is included in the product price. Any special packaging requirements are subject to individual quotation and will be charged separately.

In selected cases, individually agreed pricing terms may apply.

DELIVERY TERMS

Prices are based on EXW Wrocław, Poland. Under EXW terms, the customer is responsible for arranging transport, insurance, and collection of the goods from the agreed pickup location.

If the customer arranges transport independently or appoints their own carrier, LOFTLIGHT is not responsible for the transport process, transport costs, delays, or damage sustained in transit.

Transport can be arranged by LOFTLIGHT upon the customer's request. In such case, the transport cost is quoted separately and confirmed individually, depending on the order size, product dimensions, delivery location, and carrier availability.

If transport is to be quoted by LOFTLIGHT, the customer must provide the full delivery address, contact person, phone number, email address, and any additional delivery details required to prepare the transport quotation.

GENERAL PRODUCT INFORMATION

Due to the nature of the materials and the handmade production process, minor differences in colour, structure, dimensions, and finish of individual elements are acceptable.

Many finishes are applied by hand and may vary in colour, tone, and surface character. Exact colour, tone, grain, structure, or finish matching cannot be guaranteed. Variations in concrete, wood, brass, steel, and other natural materials are inherent to the production process and the character of the material.

Elements made of brass, wood, concrete, and other natural materials may change their appearance over time due to use, oxidation, ageing, and external factors.

Photos, visualisations, and colour presentations are for illustrative purposes only and may slightly differ from the final product.

The term "LED dimmable" does not mean that a dimmer is included in the set. A dimmer, remote control, driver, or any other additional component is included only if explicitly stated in the product description.

Light bulbs are sold separately unless stated otherwise for a given model. Light bulbs are not supplied for markets using 110-127 V electrical systems, including the USA.

Table and floor lamps are supplied with plugs compatible with type E/F socket standards, unless agreed otherwise.

IP65 versions, additional components, material variants, and special configurations apply only to selected models and are specified with the respective products.

The standard power cable length is 120 cm. For lamps suspended on steel cables, the standard supporting steel cable length is also 120 cm. Cable extension up to 200 cm is included in the product price, while longer cables require an individual quotation according to the customisation offer.

Cable colour, braid type, ceiling rose, and selected configurations may be customised according to the technical capabilities of a given model.

Products are manufactured in accordance with applicable European Union requirements. Detailed technical or certification information can be provided upon request.

CLAIMS AND TRANSPORT DAMAGE

Transport damage or visible defects must be reported within 48 hours of delivery. The claim should include photos of the damaged product, photos of the outer packaging, and, where applicable, a signed damage report or delivery protocol prepared with the courier.

Claims related to transport damage or visible defects reported after this period may not be accepted.

Hidden defects, not visible upon delivery, must be reported without undue delay and no later than 14 days after discovery of the defect.

All claims must be submitted by email to: export@loftlight.pl.

The complete set of information and documentation is necessary for the proper processing of the claim. Upon confirmation of the defect, the defective part or product will be repaired or replaced within a period agreed individually with the customer.

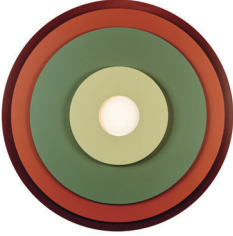

For orders collected under EXW terms by the customer or by a carrier appointed by the customer, any transport-related claims should be handled directly by the customer with the carrier or insurer.

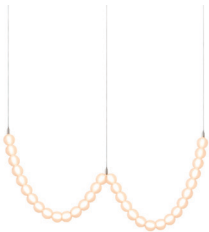

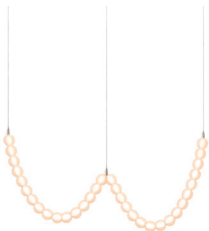

FINAL INFORMATION

LOFTLIGHT reserves the right to introduce technical, structural, material, and visual changes to the offered products without prior notice, provided they do not affect the essential functionality of the product.

Detailed terms of sale, complaints, and order fulfilment are defined by the applicable regulations and the conditions agreed individually during the ordering process.

This price list replaces all previously published or advertised price lists and remains valid until a new version is issued.

ELECTRICAL CABLES

It is possible to replace the standard cable with another option from the available range of braided cables. The available options include cotton, linen-cotton, and polyester braided cables, offered in various colour variants.

The standard power cable length is 120 cm. For lamps suspended on steel cables, the standard supporting steel cable length is also 120 cm. Cable extension up to 200 cm is included in the product price, while longer cables require an individual quotation according to the customisation offer.

Electrical cables:	Two-core 2 × 0.75 mm ² (all colours from the palette) or three-core 3 × 0.75 mm ² (colours: black, white, red)
Conductor material:	Copper
Rated voltage:	300 V
Maximum conductor temperature during short circuit:	150 °C
Cable length:	From 1 to 100 m
Cable outer diameter:	Approx. 6 mm

Customisation	Price
Cable extension above 200 cm	+ 5 €/m

TYPES OF AVAILABLE BRAIDS

COTTON

Cotton braid has a soft texture and a natural character. It works well in interiors dominated by natural materials and a calm colour palette. It allows for subdued, matt colours and pairs well with wood, concrete, and metal.

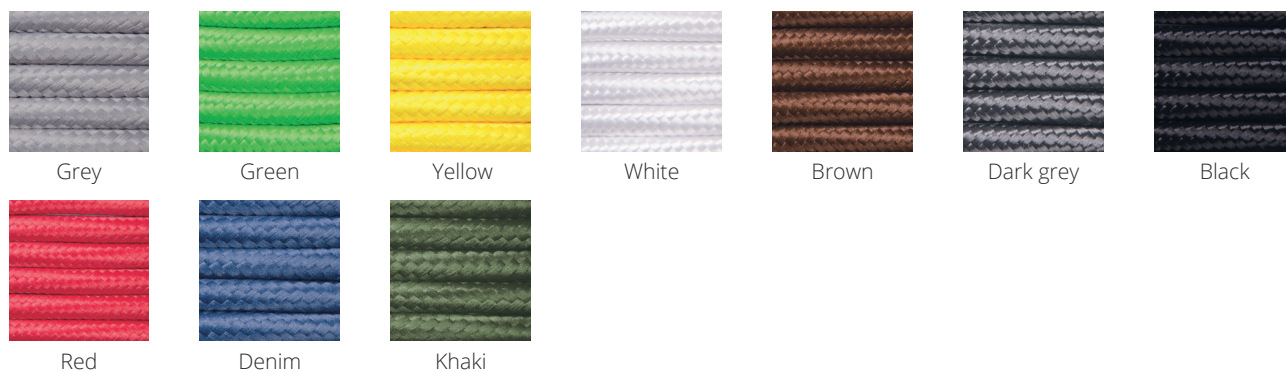

LINEN + COTTON

Linen-cotton braid has a more pronounced texture. The addition of linen gives the cable a slightly raw, natural character. It is well suited to interiors inspired by natural materials and to lamps with a more minimalist form.

POLYESTER

Polyester braid allows for intense and vivid colours. The material's texture is more regular and technical compared to natural braids. This type of cable works well in modern interiors or wherever the cable is intended to serve as a distinct colour accent.

Custom braid colours are also available.
Full cable range: www.loftlight.pl/kable-w-oplocie/

CEILING ROSE

It is possible to replace the standard ceiling rose with a concrete variant or to combine multiple lamps on a single multi ceiling rose. For convenience, images of the ceiling roses typically assigned to individual products are shown below.

MULTI CEILING ROSE

Selecting a round concrete ceiling rose with a diameter of 30 cm, designed for mounting 3 to 6 lamps, does not affect the product price. Upon request, it is possible to prepare a metal ceiling rose with a diameter of 50 cm or larger, with an appropriate number of mounting points. Such solutions are subject to individual quotation.

When choosing lamps with an E27 socket, attention should be paid to matching the light bulb size to the diameter of the rose to ensure that individual lamp elements do not touch each other.

For multi configurations on a round rose, lamps with a diameter not exceeding 11 cm are recommended.

Models recommended for installation on a 30 cm round concrete ceiling rose:

1. Bola Bola
2. Bola Concrete
3. Bosca
4. Hidalgo (max. 3 shades)
5. Jubi Pendant
6. Kalla (all series)
7. Matuba (all series)
8. Sopel
9. Woodoo

	Price *price when purchasing the lamp	Price *price when purchasing the ceiling rose only
Round multi ceiling rose Ø 30 cm Ø 50 cm	+ 10 €	50 €

LONGITUDINAL CEILING ROSE

Elongated ceiling roses, typically used in the Concrete Line series, are available in lengths from 40 to 120 cm. It is also possible to produce a rose of custom length, with the appropriate number of mounting points matched to the chosen lamp configuration.

When selecting the rose length, the diameter and number of lamps should be taken into account. The minimum distance of the outermost mounting points from the side edge of the rose is 7.5 cm. The method of attaching lamps to the rose remains in accordance with the standard specified for the given model.

		Price *price when purchasing the lamp	Price *price when purchasing the ceiling rose only
Longitudinal	L: 40 cm	0 €	15 €
Longitudinal	L: 60 cm	+ 7 €	25 €
Longitudinal	L: 80 cm	+ 12 €	30 €

MATERIALS AND COLOURS

The colour chart helps to better understand the materials and finishes used in the lamps. The individual palettes differ not only in colour, but also in texture and surface character. All finishes are produced in our workshop.

CONCRETE COLOURS

Concrete may exhibit varying levels of colour saturation within a single element. This is a natural result of the handmade production process, which gives each lamp an individual character. Concrete elements from different batches may vary slightly in colour.

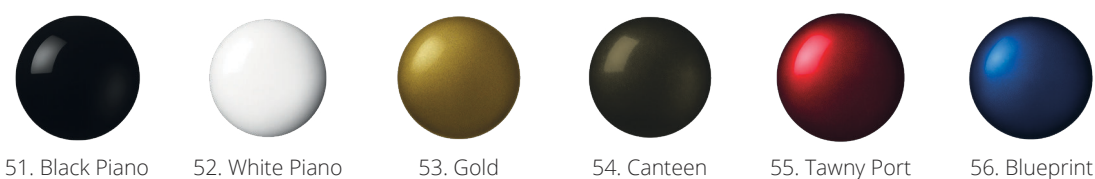

SLIGHT LIGHT COLOURS

The palette includes matt-finish colours selected from the Pantone catalogue. The individual variants allow the character of the lamp to be matched to the interior, ranging from more subdued tones to bold colour accents.

PIANO & METALLIC EFFECT

Glossy finishes are divided into two series, which differ in surface finish and visual colour clarity. This palette is based on precision, attention to detail, and a clear, pronounced material effect. Colours from this palette can be applied to most metal lamp models.

METALS

This palette uses stainless steel and brass in their natural form. The materials are available in two finish variants: hand-polished with a subtle sheen, and a more raw version with a visible surface texture.

61. Inox Steel

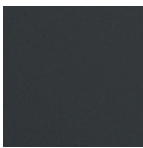

62. Brass

ANODE EFFECT

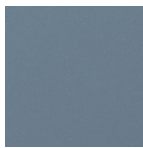

This group of finishes is intended for metal lamp components and is inspired by the visual effect of anodised surfaces. The pearlescent finish gives the colours subtle depth and a delicate tonal variation.

71. Natura

72. Sterling

73. Sapphire

74. Malachite

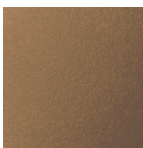

75. Aubergine

VELVET

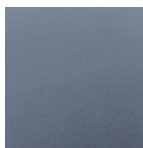

Velvet is a finish with a soft, delicate surface that gives the lamp a warmer and more inviting character. The colours in this palette are selected to naturally complement concrete as well as other materials and finishes. The coating is applied in our own flocking facility.

91. Black

92. Camel

93. Cold Grey

WOOD

Wood brings a natural surface pattern and a warm appearance to the lamp. Depending on the model, the finish may vary in terms of gloss level and type of protection. Individual elements may differ in grain, shade, and texture.

GLASS

Various types of glass are used in the lamps, ranging from sandblasted and transparent to smooth and fluted glass. The selected finish affects both the appearance of the lamp and the way the light is diffused.

More information about available finishes can be found at www.loftlight.eu in the "Colour Chart" section.
Changing the product colour to another colour from the LOFTLIGHT palette: 30 EUR.
Custom colour outside the LOFTLIGHT palette, e.g. RAL: quoted individually.

REPLACEABLE LIGHT SOURCES DESIGNED FOR LOFTLIGHT LAMPS

To order the appropriate replacement light source, please include the name of the lamp model in your order. Each model has a different installation procedure.

The light source has the same parameters as the one used in the original lamp. This applies to the following LED module types: 6 W, 14 W, 18 W, 24 W.

LED strips require a separate quotation based on the specific lamp model.
